- Web Hosting – **BSM TECHNOLOGIES**

Value Added Solutions

Market Focus	Bid Freight Global	Others	Discussion
Load tendering/bidding	✓	✓	BFG's powerful engine provides an online traffic management solution for building load templates, automatic tendering by rank to core carriers, and reverse auction functionality for public bid loads.
Documentation and Imaging	✓	✓	An automatic load sheet is produced from the order entry screen that covers the entire load execution process, including creating an on line dispatch, on line documentation, and a financial settlement triggering mechanism in a paperless environment.
Freight Audit/Payment	✓		Resolve rate audit issues and prevent double payments with BFG's financial settlement functionality. Negotiate better freight rates with carriers due to the fact that carriers receive more timely and accurate freight payments from you as a result.
Real Time Reports	✓		Advanced search criteria filters let you navigate quickly within the system and pull live, dynamic reports about your business for benchmarking, profit projections, and forecasting.
Customer/Carrier Portal for order interface	✓		BFG provides a system for your customers and vendors to create orders that are automatically tendered to your core carriers when they complete purchase orders. Tender orders to your non EDI enabled carriers via BFG's XML web tender functionality.
Customer Service Logs with customer tracking capabilities	✓		Create an online customer service record for each load visible to your customer through tracing and tracking numbers assigned to them for each specific load number.
